Title of your paper   Different types of Benchmarking of international datasets from dairy farms with an unique data set.

Insert ABSTRACT text

For a good Benchmarking you need data from many farms, reliable data and the calculations of the KPI's must be identical. On top of that, you need to have data over a longer period of time. It is not easy to have datasets that fulfil these requirements. However, if you have it is a powerful dataset it can help drawing good conclusions. Information about external factors that have an effect on the KPI's makes the picture complete. Looking at an international dataset, with data from an identical group of farms 1 year ago and now, gives a lot of insight of trends going on at the farms.

This presentation is about what benchmark opportunities and problems there are, and it is illustrated with nice examples with real data.
